SUMMARY

Information Technology graduate with hands-on experience in full-stack web development, Java desktop applications, and machine learning. Built AI-powered agricultural systems, responsive web applications, and database-driven software using Next.js, React, Java, Python, Laravel, and MySQL. Passionate about solving real-world problems through software engineering and eager to contribute to an innovative development team.

TECHNICAL SKILLS

Programming Languages:

JavaScript, TypeScript, Python, Java, Kotlin, PHP, SQL, HTML5, CSS3

Frameworks & Libraries:

Next.js, React, Laravel, FastAPI, JavaFX, Tailwind CSS, Bootstrap, Framer Motion

Databases:

MySQL, PostgreSQL, SQLite, Supabase, Room Database

Developer Tools:

Git, GitHub, Visual Studio Code, IntelliJ IDEA, Android Studio, Canva, Vercel

SELECTED PROJECTS

CropEye

Web-Based Maize Leaf Disease Detection and Classification Using UAV Imagery and Convolutional Neural Networks

Technologies: Next.js, React, TypeScript, Tailwind CSS, FastAPI, Python, YOLOv8 (Ultralytics), OpenCV, Supabase (PostgreSQL, Authentication, Storage), REST API, Git, GitHub, Vercel

- Developed a full-stack web application for detecting and classifying maize leaf diseases from UAV-captured imagery using the YOLOv8 object detection model.
- Built a responsive frontend with Next.js, React, TypeScript, and Tailwind CSS, providing an intuitive interface for image uploads and visualization of detection results.
- Developed a high-performance backend using FastAPI to handle image processing, model inference, and RESTful API communication.
- Integrated YOLOv8 with OpenCV for image preprocessing, object detection, and disease classification.
- Implemented Supabase for PostgreSQL database management, user authentication, cloud storage, and project data persistence.

TalkTiles

Android Augmentative and Alternative Communication (AAC) Application

Technologies: Android Studio, Kotlin, Room Database

- Developed an AAC mobile application that helps children with autism communicate using interactive visual tiles.
- Implemented customizable categories and text-to-speech functionality.
- Designed an accessible and user-friendly interface tailored for children.

Queue Management System

Desktop Queue Management Application

Technologies: Android Studio, Java, SQLite, Room Database

- Built a JavaFX desktop queue management application.
- Implemented role-based authentication and ticket generation.
- Developed real-time queue history and reporting using MySQL.

CERTIFICATIONS

AI Ready ASEAN: AI Learning Modules (12 Hours)

ASEAN Foundation & Google.org

February 2026

- Completed a 12-hour training program covering artificial intelligence fundamentals, responsible AI, and practical AI applications.
- Developed foundational knowledge of AI concepts, machine learning, and emerging AI technologies.

EDUCATION

Bachelor of Science in Information Technology

August 2022 – June 2026

Davao Oriental State University

Relevant Coursework

- Data Structures & Algorithms
- Database Management Systems
- Object-Oriented Programming
- Software Engineering
- Web Systems & Technologies
- Information Assurance & Security
- Artificial Intelligence
- Machine Learning Fundamentals

Capstone: CropEye: Web-Based Maize Leaf Disease Detection and Classification Using UAV Imagery and Convolutional Neural Networks

ADDITIONAL INFORMATION

Languages

- English
- Filipino
